# Assignment on Javascript

In this project, you will create a web application to save the Notes.
Working - User will write the Title and note and it will be saved in the **Local storage** and displayed. Users can also **edit** and **delete** the note as per the requirement.

You need to create a **home page** consisting of the following things:
1. Header for the name of your app
2. Two Input-text boxes - Title and Note **(Only Title is mandatory)**
3. Button to add or save the note
4. Heading to show the notes **(A/T the notes availability)**
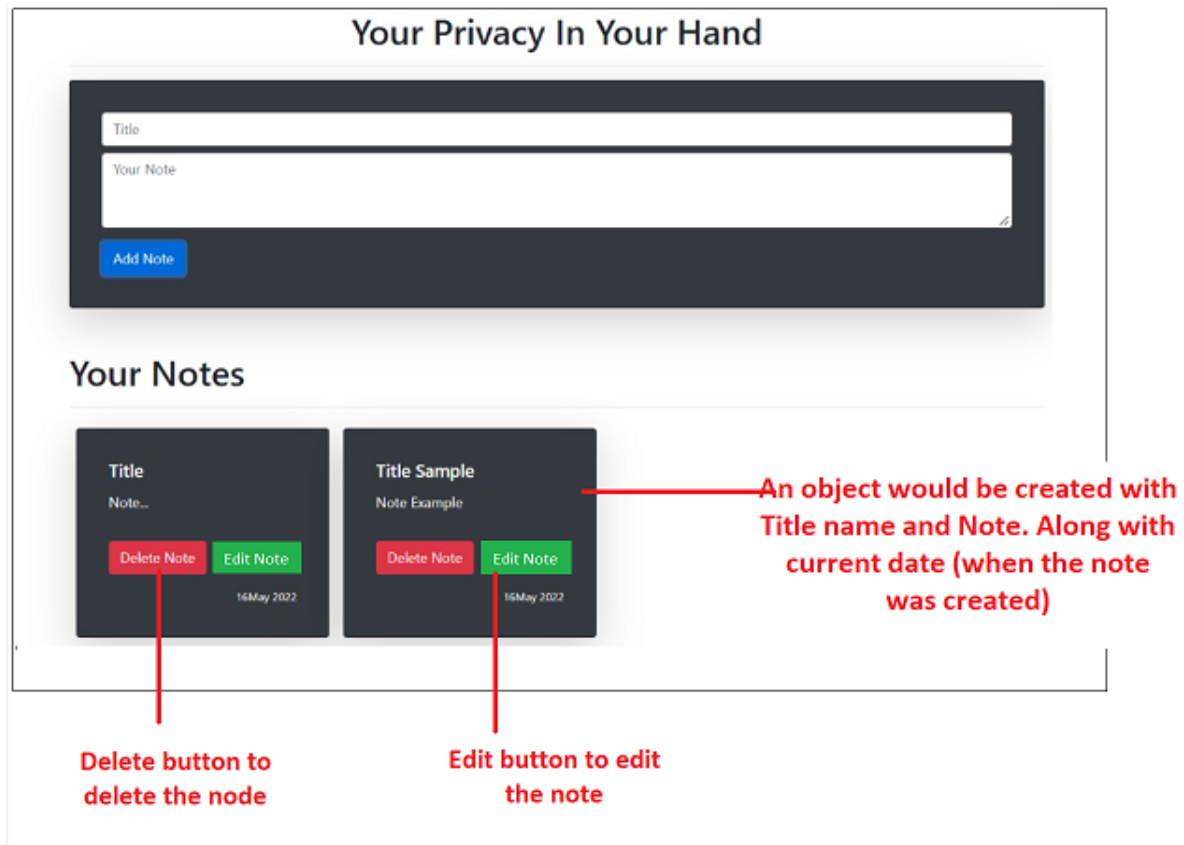

The page should look similar to this:

#This image is for reference, we expect from you to show your own design but all the mentioned functionality should be there.

Once you enter the Title, note and clicked on Add note button, a note object should be created with the following points:
1. Note title
2. Note
3. Delete note button
4. Edit note button
5. Date (the node was created) should be displayed

You will create the function for the Delete and Edit buttons.

#This image is for reference, we expect from you to show your own design but all the mentioned functionality should be there.

Note: If the Title is not entered by the user, an alert or pop-up should be displayed saying -"Please enter the title".
All the notes will only get saved when they have a title.
